

October 6, 2026 **Made with the patented MaxCorr™ process**

One process. Three product lines.

The foundation behind every product we license.

Every product we license starts with the same foundation: the patented MaxCorr™ manufacturing process.

The MaxCorr™ process is not a product. It is the process that makes our products possible. Qualified licensees use it to produce:

- **TuffCorr™ Pallets,** corrugate pallets
- **TuffTote™ Combo Totes,** an integrated sleeve plus pallet
- **RollStringer™ Supports,** protection for cylindrical products

Licensees make these products in their own plants and sell them to their own customers. The MaxCorr™ process builds on the corrugated board, converting know-how and customer base they already have, with IP and equipment specific to the MaxCorr™ process added to their operation. Established licensees are already producing, using the products internally and selling them externally.

This post opened our LinkedIn series, which walks through each product, how the process works at a high level, and what it means for a corrugated producer.

> **Buying TuffCorr™ Pallets, TuffTote™ Combo Totes or RollStringer™ Supports, or interested in licensing the MaxCorr™ process? See tggtec.com/products, visit tggtec.com/contact, call 651-504-2220 or email info@tggtec.com.**
