

October 28, 2026 The MaxCorr™ process

The process behind every product

MaxCorr™ technology is a process, not a product.

People sometimes ask whether MaxCorr™ technology is a pallet. It isn't. The MaxCorr™ process is TGG's patented manufacturing process, and it is what makes TuffCorr™ Pallets, TuffTote™ Combo Totes and RollStringer™ Supports possible.

At a high level, the MaxCorr™ process enables production of patented and patent-pending corrugate assemblies while maximizing production and cost efficiency. The same process supports standard and non-standard sizes, so a custom size does not carry a labor penalty.

What it means for a corrugated producer

For a corrugated producer, that matters in two ways. The process runs inside your own operation, building on the corrugated board and converting know-how you already have, with equipment specific to the MaxCorr™ process added. And you do not have to invent the technology. TGG designed and developed it; licensees put it to work.
